

What is a Kalshi Clone Script and How Does It Work

Autor: stevejohnson - 2026/04/16 13:25

A Kalshi clone script is a ready-to-deploy software solution designed to replicate the core architecture and trading mechanics of the Kalshi platform. It enables business owners to launch a marketplace where users trade "Event Contracts"—binary options (Yes/No) on everything from Federal Reserve interest rate hikes to cinematic box office results.

Hivelance is a leading expert in prediction market solution development with a focus on high-performance. Utilizing our Kalshi Clone Script, we are creating an innovative market for 2026 using AI-driven data and blockchain technology for enhanced transparency. We offer more than just a codebase; our Kalshi Clone Script solution will provide you with a foundation to grow your prediction market business.
